The Case of Mr. Kashihara: Another Case of Substantial Gains in Reading and Listening without Output or Grammar Study

Beniko Mason

"Mr. Kashihara" is a 35 year old Japanese man who read 4125 pages of graded readers at home on his own for six months after he took a comprehension-based English class for beginners in an adult education program. At no time did he study English grammar, and at no time did he attempt to speak or write English. He gained 220 points on the TOEIC test in six months. This result is consistent with two previously reported case studies of adults (Mason, 2011; Mason, 2013).

Mr. Kashihara

This study is the third in a series of studies that reports on the effects of free voluntary reading on TOEIC gains with individual subjects, all older adults (Mason, 2011, Mason, 2013). I report here on the gains made by a 35-year-old Japanese man who read graded readers on his own and gained 220 points on the TOEIC in 6 months.

Mr. Kashihara is a computer designer who creates websites and CG animations. He entered graduate school at the age of 22 and after finishing a master's program worked at a company until he was 30 years old. Then he went back to school and finished his doctorate when he was 33 years old. Currently he works as a computer designer and also teaches computer courses at a vocational school in Osaka. He reported that he had not studied English for 12 years prior to starting the reading program described here.

To improve his ability to read information in English on the Internet, Mr. Kashihara took a 12-week beginning level English reading course offered by an adult education program at a university in Osaka during the summer in 2011.

The orientation for the reading course included information about second language acquisition theory, focusing on the Comprehension Hypothesis (Krashen, 2003), and methodology consistent with the theory. Students were told that the methodology was meaning-based, and that there would be no

grammar instruction, vocabulary study, and no comprehension questions following listening and reading. Class-time was devoted to listening to stories told by the instructor, and homework was reading graded readers, beginning with very easy books.

Mr. Kashihara read over 2000 pages during the summer. After finishing the class, he did not take the course again, but continued to read on his own, following the principles he was exposed to in the summer reading class. He checked books out from the university library including Macmillan graded readers, books from the Oxford Bookworm series, Penguin graded readers, other books for young adults and bestsellers (Appendix). Although he worked every day, Mr. Kashihara managed to find time to read: He reported that he carries his books with him everywhere he goes and reads when he finds time.

He took the TOEIC examination just after completing the class, again eleven weeks later, and a third time six months after finishing the class.

He reported that he did not do any special preparation for the TOEIC examination, but said that he looked up unknown words on a computer dictionary and recorded the words on Excel. Mr. Kashihara said that he probably spent about 1/3 of his total time devoted to English doing this. He said that he encountered many unknown words when he first started the reading course.

Results

Mr. Kashihara improved quite a bit over the first eleven weeks he spent reading, gaining 175 points, reading 1592 pages, and he improved 45 points over the next sixteen weeks, reading 2533 pages. Note that he improved on both reading and listening subtests. Overall, he averaged about 22 pages of reading per day, and gained an average of .05 points for each page read. Table 1 presents three sets of TOEIC scores. Table 2 compares Mr. Kashihara and readers studied in previous publications (Mr. Tanaka (Mason, 2011) and Mr. Nakano (Mason, 2013).

Table 1. Mr. Kashihara's TOEIC test results

TOEIC	9/11/2011	11/27/2011	3/18/2012	Total gain
Listening score	165	225	245	80
Reading score	55	170	195	140
Total score	220	395	440	220
Pages read		1592	2533	4125
Total gain between tests		175	45	220
Weeks between tests		11 weeks	16 weeks	27 weeks
Pages read/week		144.7	158.3	Average 152.8
Pages read/day		20.6	22.6	
Hours spent/day		1.6	1.9	
Gain per week		15.9	2.8	
Gain per month		58.3	12.8	
Points per page		0.11	0.02	0.05

Table 2. Comparisons to the previous cases

Estimated % of time	Mr. Tanaka	Mr. Nakano	Mr. Kashihara
engaged in reading	(78%)	(92%)	(67%)
Age	42	75	35
Length of the study	12 months	5 months	6 months
	(Jan., 2009 ~	(June, 2011 ~	(Sept., 2011~
	Jan., 2010)	Nov., 2011)	March, 2012
Pages read	6456	2624	4125
TOEIC score gain	655-475=180	580-495=85	440-220=220
Points/month	15	17	36
Points/page	0.03	0.03	0.05

The similarities among these cases are striking. All three made good progress largely from reading. As noted earlier, Mr. Kashihara included extra vocabulary study (looking up words and listing them). Mr. Tanaka's "study time" was also dedicated to vocabulary (Mason, 2011), while Mr. Nakano spent about 8% of his English study time working through a TOEIC preparation textbook (Mason, 2013). Also, all three made similar progress in terms of points gained on the TOEIC per page read. All three

made far better progress than junior college English majors relying on classroom instruction (Mason, 2013). The English majors who spent about 500 hours over four semesters with classroom instruction gained only 135 points in total on the TOEIC (399.3-264.9). The gain scores on the reading section was 59.1 (153.6-94.5), and on the listening section it was 74.6 (246.8-172.2) (Pendergast, 2010).

Objections

Despite these consistent results, critics have raised objections. A frequent reaction to positive results about the effect and efficiency of reading is that the method will not work for "regular" students; those making progress from reading alone are "special," exceptions to the normal route of language and literacy development.

Previous studies that demonstrated similar results of the power of reading on standardized tests used very different analytical approaches and subjects such as multiple regression and structural equation modeling (analytical approaches) as well as international students preparing for study in the US, international students in the US, and students of English as a foreign language in Taiwan (subjects) (Gradman & Hanania, 1991; Constantino, Lee, Cho, & Krashen, 1997; Lee, 2007).

The subject in this study was a normal, un-extraordinary person, as were the subjects in previous studies showing the power of reading. In one study they were reluctant learners of English (Mason & Krashen, 1997). In other studies, the subjects were Health Science majors (Mason, 2007) and vocational students (Lee & Hsu, 2009). The adult participants in previous case histories in this series (Mason, 2011, 2012) worked during the day.

Critics also suggested that those making gains from comprehensible input alone must have gotten supplementary input or instruction from other places. This could not be the case in Mason, Vanata, Jander, Borsch, & Krashen, (2009), a study that demonstrated impressive gains in vocabulary from listening to stories in German. These students had absolutely no contact with German outside of class.

The real problem: Access

The real problem is making sure those who want to improve in a second language have easy access to a great deal of truly interesting reading. Critics say that students do not read enough to receive

sufficient amount of comprehensible input for desired language acquisition; therefore, they need direct teaching (Cobb, 2008).

Students read when they have books. An obvious solution is to provide access to a lot of reading material. It has been suggested that children should have access to vast amount of information on the Internet, because children can teach themselves without supervision or formal teaching if they are motivated and share interests with friends (Sugata Mitra:

http://www.ted.com/speakers/sugata_mitra.html). Although computers are becoming less expensive, and reading material is readily available on the Internet, they can not escape from troubles with breakdown, running and repairing expenses. On the other hand, books can be easily maintained and last longer; furthermore, they cost much less.

The solution to the TOEIC/English problem

TOEIC is now the worldly recognized test for companies in Asia. In Japan the number of TOEIC test takers in 1979 was only 3000, but it increased to 268,000 in 1989, 870,000 in 1999, and 1,680,000 in 2009 (http://www.toeic.or.jp/toeic/data/data.html). Some companies now use TOEIC test scores when making decisions concerning hiring, promoting, and firing their employees. "Soft Bank," a cell phone company in Japan, gives a 10,000 US dollar reward to employees who score over 900 points and 3,000 US dollars for a score of over 800 on the TOEIC.

The total number of Japanese who took the test in 2011 was 2,270,000 (at a cost of more than 124 million US dollars in test taking fees). The number of university students who took the test was 352,635. In 2011 1st year Japanese college students' average score on the TOEIC was 421 (Listening = 234; Reading = 187), and 4th year average was 512 (Listening = 286, Reading = 226) (TOEIC TEST DATA and ANALYSIS 2011: http://www.toeic.or.jp/toeic_en/pdf/data/TOEIC_DAA2011.pdf). Thus, Japanese college students in current English programs at university gained an average of 91 points in four years.

The subject in this current study, a 35-year old Japanese man, read 4125 pages (about one million words) in six months and gained 220 points on the TOEIC, far more than college students do in four years. This is another case of substantial gains in reading and listening without output or grammar study. As of the time of this writing (January, 2013), Mr. Kashihara is still reading. He comes to the university library regularly to check out books.

The results presented here are consistent with other studies showing that gains on the TOEIC or TOEFL are related to the amount of reading done. As impressive as these cases are, however, it is imperative that we examine readers and listeners who did no formal study of any kind, who focused only on comprehension.
